WhatsApp OTP Setup Guide

ConnectBhai · AiSensy WhatsApp Business API

Overview

ConnectBhai sends login OTPs to users on WhatsApp through AiSensy. This guide covers the one-time account setup, the OTP template, the API campaign, and testing.

What you need

- AiSensy account for the Connect Bhai project (WhatsApp Business API connected)
- Business documents for Meta verification: legal name, address, GST / incorporation certificate, website
- Recharged WhatsApp conversation credits (WCC)
- A test WhatsApp number to receive the OTP

Part 1 – Enable the WhatsApp Business account

AiSensy blocks template creation until the Business account is fully set up.

1. Open **Dashboard** and finish every step in **Setup Free WhatsApp Business Account**, including display-name approval.
2. Complete **Business Verification** (FBM / KYC) with the documents above, then wait for Meta's approval (can take a few days).
3. Open **Billing & Usage** and recharge the WCC credits.
4. If template creation is still refused, contact AiSensy support and ask them to enable template creation for the account.

Part 2 – Create the OTP template

Go to **Manage** → **Template Message** → **Create Template** and enter:

Field	Value
Category	AUTHENTICATION
Language	English
Template name	connectbhai_otp
Sample value	123456
Expiration warning	5 (minutes)
Copy Code	123456

Click **Submit**. Authentication templates are usually approved by Meta within minutes. Confirm it appears under the **Approved** tab.

Part 3 – Create the API campaign

1. Go to **Campaigns** → **Launch** → **API Campaign**.

2. Campaign name: **connectbhai_otp_login**.
3. Select the approved **connectbhai_otp** template and click **Set Live**.

Good to know

- Trial plan limit: 250 template messages per 24 hours.
- Mobile numbers are entered as 10-digit Indian numbers; the country code (+91) is added automatically.
- Codes expire after 5 minutes and allow a limited number of attempts.
